Role: Developer

Responsibility: Designer and developer

Education Background

2002/09—2006/06:

Xi'an University of Science and Technology

GIS, Bachelor

GIS is a computer system for capturing, storing, checking, integrating, manipulating, analyzing and displaying data related to positions on the Earth's surface. Typically, a Geographical Information System is used for handling maps of one kind or another. These might be represented as several different layers where each layer holds data about a particular kind of feature. Each feature is linked to a position on the graphical image on a map and a record in an attribute table. GIS can relate otherwise disparate on the basis of common geography, revealing hidden patterns, relationships, and trends that are not readily apparent in spreadsheets or statistical packages, often creating new information from existing data resources.

Language Ability

English, normal, can communicate in daily work, such as documents, email threads, conference call.
